Rule change chilled immigrants' use of safety-net programs

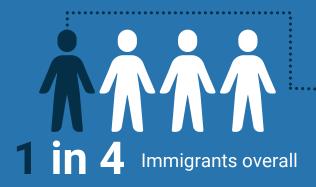

Researchers from the UCLA Center for Health Policy Research analyze immigrants' avoidance of public programs and how it impacted their access to health care in 2019. Data are for immigrant adults in California with incomes below 200% of the federal poverty level (FPL).

Background

Being identified as a "public charge" — someone who is likely to be dependent on government aid as their primary means of support — affects whether or not an immigrant can live permanently in the United States.

Immigrants who avoided public programs out of fear it would negatively impact immigration status, by category

Citizenship Status
