

DEPARTMENT OF COMMUNITY HEALTH SCIENCES

WHY FSPH Community Health

Sciences? Here students explore and analyze the social determinants of health and illness. They master skills in program development, evaluation, and research methodologies in order to conduct evidence-based interventions that promote well-being in diverse communities across the life course. The department's faculty is multidisciplinary and includes those whose primary training is in social sciences, behavioral sciences, medicine, nutrition, demography, economics, and health promotion and education. The curriculum of both master's and doctoral degrees integrates basic theories, research methods, and programmatic strategies, and applies them to real problems of human populations to affect positive change.
